

Together, let's make litter extinct!

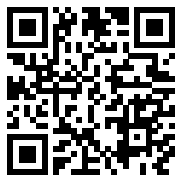

As rain falls it picks up litter from our streets, flows through our stormwater drains, and ends up in our rivers and creeks.

At Melbourne Water, we manage a complex drainage system to keep our rivers and creeks healthy, but we need your help.

Put litter in the right bin, buy items with less packaging, and reduce, reuse, and recycle.

Together, let's protect our wildlife's waterway homes, including the platypus, by keeping our communities clean and safe for today, tomorrow, and beyond.
