

Ryans Road Retarding Basin

Project update

February 2018

Melbourne Water will be upgrading Ryans Road retarding basin in Diamond Creek to ensure it continues to reduce the risk of flooding to the community.

Ryans Road retarding basin plays a crucial role in managing stormwater in the local area. Recent assessments have shown the embankment and outlet filters will need to be upgraded to ensure the continued integrity and stability of the retarding basin.

Update

Upon investigation of this retarding basin within the road reserve, we originally expected works to begin in early 2018.

These works have been delayed due to further investigation being required.

To ensure this safety upgrade is delivered at a high standard, we will be including additional design requirements, from the original safety upgrade design, and confirming design specifications with the service providers in your local area.

We anticipate this project will be delayed until late 2018.

Working with the community

- We're committed to reducing the impact of construction works on the local community.
- We will be speaking with local residents in late 2018 about the upcoming works.
- We'll continue to keep you updated as the project progresses.

Location and access

The Ryans Road retarding basin is located in the road reserve on the downstream side of the basin, off Ryans Road, and in between Juane Park Drive and Ryans Road.

We'll continue to work with local residents and other users of the basin to inform them of the works schedule and any associated impacts that may take place.

We will keep you informed once we identify when the works are ready to proceed.
