

## Waterways Local Update 2016-17

Melbourne Water's work to improve waterways and provide flood protection in the **City of Hobsons Bay**.

**453 m<sup>3</sup>**  
SEDIMENT AND SILT  
REMOVED FROM WATERWAYS

**\$107,803**  
IN COMMUNITY  
FUNDING

**154**  
REFERRALS FOR LAND  
SUBDIVISION REVIEWED

Melbourne Water makes a vital contribution to the famous Melbourne lifestyle by underpinning human health, enhancing community well-being, supporting economic growth and balancing the natural and man-made environment.

Together with our partners, we look after 8,400 km of rivers and creeks, 428 wetland treatment systems and more than 1,400 km of regional drainage systems in the Port Phillip and Westernport region. This work is funded by the Waterways and Drainage Charge, which is paid by property owners and collected by retail water companies on our behalf.

Melbourne Water cares for many waterways. Some in your local area include:

- Kororoit Creek
- Skeleton Creek
- Stony Creek
- Cherry Lake
- Laverton Creek

# Healthy waterways

## Maintenance and new projects

Each year we create and maintain healthy waterways by removing litter, debris and excess sediment. We remove and spray weeds, cut grass and plant native trees and shrubs.

### What we have done

### Why

**1.4 km** Revegetation

We plant native trees and shrubs along waterways to provide habitat for birds and animals. Revegetating waterways and replacing weeds with native plants prevents erosion and improves water quality.

**21.4 km** Weed control

Introduced and noxious weeds can choke waterways and take over from plants that provide healthy habitats for birds and animals.

**453 m<sup>3</sup>** Sediment, silt, litter, debris removal

Silt, sediment, litter and debris is removed for drainage and flood protection, and to prevent pollution building up in our waterways and wetlands. An excess of these can impact the habitat for platypus, fish and other animals, as well as native plants.

**Removed the jetty and concrete infrastructure, and revegetated with 2300 plants along Kororoit Creek, Altona Coastal Park**

This work visually improves the area and helps restore endangered Coastal Saltmarsh vegetation.

## Stormwater

We work closely with Council and local communities to better manage stormwater to protect the environment, provide alternative water sources and improve the stormwater that flows into local waterways.

### What we have done

### Why

**Through the Clearwater program, we supported Council to take a whole-of-water approach by providing a wide range of tools and resources, and opportunities to participate in a variety of activities**

This work helps to improve skills, increase knowledge and foster better networks across councils to change the way we manage water for healthy, connected communities.

**Living Rivers supported the development of a strategic management plan to upgrade the Hobsons Bay Operation Centre wash bay using water sensitive urban design principles**

A strong plan will decrease the demand on drinking water to the wash bay and use stormwater instead, reducing the amount of stormwater being released into waterways.

**Living Rivers contributed funding to design and construct a swale system and porous paving carpark and drain at PA Burns Reserve in Altona**

The works allow for stormwater to be treated, reducing the impact of stormwater on Port Phillip Bay.

Through our Living Rivers program, we worked with Council and contributed \$52,500 to projects that assist waterway health and create sustainable stormwater management solutions in your area.

## Environmental water

We work with government agencies, councils, industries, landowners and the community to provide the allocated water needed in rivers to maintain healthy natural ecosystems.

### What we have done

**Worked with local landowners to monitor groundwater levels in the Truganina swamp**

### Why

The information collected allows us to understand the role groundwater plays in supporting vegetation, and helps us further enhance and manage the swamp.

## Monitoring and research

We regularly undertake extensive monitoring, investigations and research to help us better understand how we can improve local waterways.

### What we have done

**Undertook monthly monitoring of water quality at five sites within your area. These tests measure:**

- water temperature
- dissolved oxygen
- salinity (conductivity)
- pH level
- nutrients (nitrate, nitrite, ammonia, Kjeldahl nitrogen, soluble reactive phosphorus and total phosphorus)
- indicators of faecal contamination (*E. coli*)
- metals (arsenic, cadmium, chromium, copper, lead, nickel and zinc)

### Why

Our water quality monitoring program is designed to assess broad-scale, long-term trends in water quality (typically over 8 -10 years). We use this data to help identify pollution sources and inform the community about local water quality.

**Monitored sediment at Truganina Swamp, Cherry Lake, Kororoit Creek and its estuary**

This monitoring improves our knowledge of contaminants and guides our management of the waterways.

## Planning for future development

---

We plan for future development to ensure growing communities do not threaten local waterways. We provide advice and assist new developments to ensure they do not increase flood risk.

### What we have done

### Why

**154** referrals for land subdivisions reviewed

To ensure proposed land subdivisions meet current standards for drainage and stormwater quality.

**120** development applications reviewed

To ensure that growing communities don't contribute to an increase in flood risk.

**59** flood information requests reviewed

To provide flood information to property owners and people interested in purchasing or redeveloping property.

**24** applications for works near Melbourne Water assets and works such as bridges, shared pathways and jetties reviewed

To ensure waterways, and the plants and animals that live there, are protected from the potential impacts of building works.

**15** stormwater connection applications reviewed

To ensure waterways and the plants and animals that live there, are protected from the potential impacts of construction works.

## Flood protection

---

While floods are natural and we can't stop them all from occurring, we aim to minimise the damage they cause to people, places and communities.

We manage the regional drainage system and work with Council, the Victorian State Emergency Service, the Bureau of Meteorology, property owners and developers to make sure flood information is up to date. We provide flood warning services, prepare flood response plans, and identify and construct new flood protection projects in areas with the greatest need.

### What we have done

### Why

Worked with stakeholders to review plans and hydraulic reports for the Outer Suburban Arterial Roads and Westgate tunnel projects

Ensure proposed works will not impact the floodplain, path of over-land flow, assets and waterways, and that the project is feasible, safe and possible for community use.

Continued collecting hydrological data

Data is used to analyse flood warning during emergency situations, as well as for such things as development referrals and projects to reduce the risk of flood.

10 volunteers in your area provide us with rainfall data by recording information from a rain gauge in their backyard. These figures and the data from our automated gauges provides us with valuable rainfall information.

## Working with the community

The involvement of community groups, volunteers, land managers and farmers supports our management of local waterways and regional drainage systems. If you'd like more information about funding opportunities, please call 131 722 or email [river.health@melbournewater.com.au](mailto:river.health@melbournewater.com.au)

Funding provided	Grant	For
<b>\$4,293</b>	<b>Stream Frontage Management</b>	Private land owners and managers for works that protect or enhance riverbanks, such as weed control, fencing and planting native trees.
<b>\$37,832</b>	<b>Community Grants</b>	Volunteer and community groups for works that protect or enhance riverbanks on public land, raise awareness, and provide training and education to protect local waterways.
<b>\$13,178</b>	<b>Corridors of Green</b>	Councils and public land managers for projects such as weed control, fencing and creating management plans.

We also worked with the local community on several events and initiatives throughout the year.

### Who we worked with

City of Hobsons Bay

St Mary's Primary School

Friends of Williamstown Wetlands

### What we did

Provided support for monitoring water quality through the Water Quality Monitoring program.

Provided support for monitoring water quality and the Waterbug Census through our programs.

Our Space Your Space is an app that helps you find land managed by Melbourne Water that you can use for community projects, such as community gardens. We encourage communities to apply to use the land.

Find out more at [melbournewater.com.au/ourspaceyourplace](http://melbournewater.com.au/ourspaceyourplace) or call 131 722.

Waterwatch is a citizen science program that encourages communities to monitor platypus, frogs, waterbugs and water quality in their local river or creeks. We empower our volunteers to collect data, protect the waterways environment and share their knowledge.

Find out more at [melbournewater.com.au/waterwatch](http://melbournewater.com.au/waterwatch) or call 131 722.
