

Waterways Local Update 2016-17

Melbourne Water's work to improve waterways and provide flood protection in the **City of Moreland**.

38.2 km
WEED CONTROL
ALONG WATERWAYS

ASSISTED
WITH LEVEL CROSSING
REMOVALS

753.3 m³
SEDIMENT AND SILT
REMOVED FROM WATERWAYS

Melbourne Water makes a vital contribution to the famous Melbourne lifestyle by underpinning human health, enhancing community well-being, supporting economic growth and balancing the natural and man-made environment.

Together with our partners, we look after 8,400 km of rivers and creeks, 428 wetland treatment systems and more than 1,400 km of regional drainage systems in the Port Phillip and Westernport region. This work is funded by the Waterways and Drainage Charge, which is paid by property owners and collected by retail water companies on our behalf.

Melbourne Water cares for many waterways. Some in your local area include:

- Moonee Ponds Creek
- Merri Creek
- Edgars Creek
- Jacana Wetlands
- Westbreen Creek

Healthy waterways

Maintenance and new projects

Each year we create and maintain healthy waterways by removing litter, debris and excess sediment. We remove and spray weeds, cut grass and plant native trees and shrubs.

What we have done

Why

1.5 km **Revegetation**

We plant native trees and shrubs along waterways to provide habitat for birds and animals. Revegetating waterways and replacing weeds with native plants prevents erosion and improves water quality.

38.2 km **Weed control**

Introduced and noxious weeds can choke waterways and take over from plants that provide healthy habitats for birds and animals.

753.3 m³ **Sediment, silt, litter, debris removal**

Silt, sediment, litter and debris is removed for drainage and flood protection, and to prevent pollution building up in our waterways and wetlands. An excess of these can impact the habitat for platypus, fish and other animals, as well as native plants.

Undertook works to control weeds and revegetate with indigenous plants along Edgars Creek

The work improves visual amenity and habitat along lower Edgars Creek.

Carried out large scale weed control and revegetation works along Merri Creek in Coburg

The work improves visual amenity, water flow and the health of the creek.

Stormwater

We work closely with Council and local communities to better manage stormwater to protect the environment, provide alternative water sources and improve the stormwater that flows into local waterways.

What we have done

Why

Through the Clearwater program, we supported Council to take a whole-of-water approach by providing a wide range of tools and resources, and opportunities to participate in a variety of activities

This work helps to improve skills, increase knowledge and foster better networks across councils to change the way we manage water for healthy, connected communities.

Living Rivers supported the development of a partnership for delivering stormwater harvesting systems across Council, Yarra Valley Water, Melbourne Water and the Department of Environment, Land, Water and Planning areas

The partnership enables Council to develop a strategic plan to collect stormwater to reduce the amount of stormwater entering our waterways.

Through our Living Rivers program, we worked with Council and contributed \$65,000 to projects that assist waterway health and create sustainable stormwater management solutions in your area.

Monitoring and research

We regularly undertake extensive monitoring, investigations and research to help us better understand how we can improve local waterways.

What we have done

Undertook monthly monitoring of water quality at one site within your area. These tests measure:

- water temperature
- dissolved oxygen
- salinity (conductivity)
- pH level
- nutrients (nitrate, nitrite, ammonia, Kjeldahl nitrogen, soluble reactive phosphorus and total phosphorus)
- indicators of faecal contamination (*E. coli*)
- metals (arsenic, cadmium, chromium, copper, lead, nickel and zinc)

Why

Our water quality monitoring program is designed to assess broad-scale, long-term trends in water quality (typically over 8 -10 years). We use this data to help identify pollution sources and inform the community about local water quality.

Undertook fish surveys at Lake Coburg dam, along Merri Creek

The surveys helped evaluate the benefits of new vertical-slot fishways installed in 2012 and complemented another monitoring program of fishway performance.

Planning for future development

We plan for future development to ensure growing communities do not threaten local waterways. We provide advice and assist new developments to ensure they do not increase flood risk.

What we have done

Why

204 referrals for land subdivisions reviewed

To ensure proposed land subdivisions meet current standards for drainage and stormwater quality.

157 development applications reviewed

To ensure that growing communities don't contribute to an increase in flood risk.

67 flood information requests reviewed

To provide flood information to property owners and people interested in purchasing or redeveloping property.

25 applications for works near Melbourne Water assets and works such as bridges, shared pathways and jetties reviewed

To ensure waterways, and the plants and animals that live there, are protected from the potential impacts of building works.

28 stormwater connection applications reviewed

To ensure waterways and the plants and animals that live there, are protected from the potential impacts of construction works.

Flood protection

While floods are natural and we can't stop them all from occurring, we aim to minimise the damage they cause to people, places and communities.

We manage the regional drainage system and work with Council, the Victorian State Emergency Service, the Bureau of Meteorology, property owners and developers to make sure flood information is up to date. We provide flood warning services, prepare flood response plans, and identify and construct new flood protection projects in areas with the greatest need.

What we have done

Why

Continued collecting hydrological data

Data is used to analyse flood warning during emergency situations, as well as for such things as development referrals and projects to reduce the risk of flood.

Worked with stakeholders to review plans and hydraulic reports to assist with the CityLink/Tulla Widening project

Ensure proposed works will not impact the floodplain, path of over-land flow, assets and waterways, and that the project is feasible, safe and possible for community use.

Carried out flood mapping on the Acacia main drain

Mapping helps us update our knowledge of flooding to better manage drains, assess flood risk in catchments and assist planning scheme overlays to reduce the risk of flooding.

Six volunteers in your area provide us with rainfall data by recording information from a rain gauge in their backyard. These figures and the data from our automated gauges provides us with valuable rainfall information.

Working with the community

The involvement of community groups, volunteers, land managers and farmers supports our management of local waterways and regional drainage systems. If you'd like more information about funding opportunities, please call 131 722 or email river.health@melbournewater.com.au

Funding provided

Grant

For

\$17,969

Stream Frontage Management

Private land owners and managers for works that protect or enhance riverbanks, such as weed control, fencing and planting native trees.

\$26,699

Community Grants

Volunteer and community groups for works that protect or enhance riverbanks on public land, raise awareness, and provide training and education to protect local waterways.

We also worked with the local community on several events and initiatives throughout the year.

Who we worked with

Friends of Edgars Creek

Coburg Lake Group

City of Moreland

Friends of Edgars Creek

Friends of Moonee Ponds Creek

What we did

Provided support on water quality monitoring through the Water Quality Monitoring program, in partnership with Merri Creek Management Committee.

Held regular discussions with environmental officers on managing waterways.

Continued to support the restoration, maintenance and enhancement of the Lower Edgars Creek area.

Held discussions on managing waterways and supported works along Gowanbrae Gully to revegetate and improve the area.

Our Space Your Space is an app that helps you find land managed by Melbourne Water that you can use for community projects, such as community gardens. We encourage communities to apply to use the land.

Find out more at melbournewater.com.au/ourspaceyourplace or call 131 722.

Waterwatch is a citizen science program that encourages communities to monitor platypus, frogs, waterbugs and water quality in their local river or creeks. We empower our volunteers to collect data, protect the waterways environment and share their knowledge.

Find out more at melbournewater.com.au/waterwatch or call 131 722.
